

SOAP

Interface description SOAP to LOGO**SOFT**

LOGOSOFT makes your print & apply labelling processes safer and more efficient. Our high-performance middleware provides central control and monitoring of your entire labelling processes.

LOGO**SOFT** offers you maximum flexibility that starts with the connection to your database system. LOGO**SOFT** provides interfaces to all common software applications, including SOAP.

SOAP has been used by many businesses as a network protocol for almost 20 years now, and is regarded as an industrial standard application in the WWW, for good reasons: SOAP is intuitive, extremely flexible, platform-independent and scalable.

» Smooth software integration due to SOAP interface. Interface connection made easy:

For smooth communication with ERP.

How does the connection via SOAP work?

To ensure that your database (ERP, LCS or similar database protected systems) can communicate with LOGO**SOFT**, SOAP is interposed as an interface, which enables your database to provide WSDL (Web Service Definition Language) files for the data exchange with LOGO**SOFT**. These WSDL files contain all data required to print your labels. It's as simple as that.

Example:

The SOAP function call:

The reply:

Data import:

- » LOGO**SOFT** calls the SOAP function at regular intervals (the polling interval is configurable).
- » LOGOSOFT imports the data from the function call into its internal database for further processing and subsequent use for LOGOSOFT applications.

Data export:

- » LOGO**SOFT** calls the SOAP function at regular intervals (the polling interval is configurable).
- » L0G0S0FT transmits the data as a function parameter to the S0AP interface.
- » Your system imports the data for further internal processing.

To be provided by the customer:

- » Access rights
- » Provide the WSDL file as a basis for a cost estimate by Logopak
